Joint Committee on Taxation

- (1) Distributional analysis includes effects from the Budget Summit Agreement, as modified by proposed amendments, with respect to beer, wine, and distilled spirits taxes, tobacco tax, energy taxes, increase in HI wage cap, and increase in the EITC; analysis does not take into effect changes as a result of taxpayer behavior.
- (2) The income concept used to place tax returns into income classes is adjusted gross income plus [1] tax-exempt interest, [2] employer contributions for health plans and life insurance, [3] inside buildup on life insurance, [4] workers' compensation, [5] nontaxable social security benefits, [6] deductible contributions to individual retirement accounts, [7] the minimum tax preferences, and [8] net losses in excess of minimum tax preferences from passive business activities.
- (3) Estimates of total tax liability presented in distributions will not match estimated changes in receipts because of differing time periods (CY 1990 vs. FY 1991-95), because of varying patterns of fiscal year receipts.
- (4) Distributions represent combined effects of individual income taxes, payroll taxes, Federal excise taxes, and estate and gift taxes. For the purpose of distributions, the full burden of payroll taxes is assigned to employees. Excise taxes are assumed to be borne fully by individuals either directly through purchase of the taxed commodity or indirectly through higher prices on all commodities as businesses pass along these added costs. Because of the uncertainty concerning the incidence of the corporate income tax, it is excluded from this table. Information in table excludes individuals who are dependents of other taxpayers.
